

IN THE CLAIMS:

Please amend the claims as follows:

Claims 1-11 (Canceled)

12. (New) An information process apparatus that performs a record and reproduction process for data, comprising:

reproduction means for performing a reproduction process that reads and reproduces desired material data from a record medium according to the management information file, the material data containing pictures and sound and the management information file managing a file of the material data being recorded on the record medium that is attachable and detachable to and from the information process apparatus;

generation means for generating reproduction history information about the reproduction process of the reproduction means, the reproduction history information composed of identification information of reproduced material data, information about a reproduction end position, and information about a reproduction method;

record means for recording a list of the reproduction history information generated by the generation means as one file different from the management information file on the record medium;

read means for reading the list of the reproduction history information recorded on the record medium by the record means;

reproduction command accepting means for accepting a reproduction command for the material data; and

reproduction control means for referencing the list of the reproduction history information read by the read means, specifying material data to be reproduced and a

reproduction start position according to reproduction history information according to a reproduction method designated by the reproduction command accepted by the reproduction command accepting means, controlling the reproduction means, and starting the reproduction process from the reproduction start position of the specified material data.

13. (New) An information process method for an information process apparatus that performs a record and reproduction process for data, the method comprising the steps of:

causing a reproduction section to execute a reproduction process that reads and reproduces desired material data from a record medium according to a management information file, the material data containing pictures and sound and the management information file managing a file of the material data being recorded on the record medium that is attachable and detachable to and from the information process apparatus;

generating reproduction history information about the reproduction process executed by a process of the reproduction step, the reproduction history information composed of identification information of reproduced material data, information about a reproduction end position, and information about a reproduction method;

recording a list of the reproduction history information generated by a process of the generation step as one file different from the management information file on the record medium;

causing a read section to read the list of the reproduction history information recorded on the record medium by a process of the record step;

causing an accepting section to accept a reproduction command for the material data; and

referencing the list of the reproduction history information read by a process of the read step, specifying material data to be reproduced and a reproduction start position according to

reproduction history information according to a reproduction method designated by the reproduction command accepted by a process of the reproduction command accepting step, controlling an execution of a process of the reproduction step, and starting the reproduction process from the reproduction start position of the specified material data.

14. (New) A program that causes a computer to perform a process that controls an information process apparatus that performs a record and reproduction process for data, the program comprising the steps of:

causing a reproduction section to execute a reproduction process that reads and reproduces desired material data from a record medium according to a management information file, the material data containing pictures and sound and the management information file managing a file of the material data being recorded on the record medium that is attachable and detachable to and from the information process apparatus;

generating reproduction history information about the reproduction process executed by a process of the reproduction step, the reproduction history information composed of identification information of reproduced material data, information about a reproduction end position, and information about a reproduction method;

recording a list of the reproduction history information generated by a process of the generation step as one file different from the management information file on the record medium;

causing a read section to read the list of the reproduction history information recorded on the record medium by a process of the record step;

causing an accepting section to accept a reproduction command for the material data; and

referencing the list of the reproduction history information read by a process of the read step, specifying material data to be reproduced and a reproduction start position according to reproduction history information according to a reproduction method designated by the reproduction command accepted by a process of the reproduction command accepting step, controlling an execution of a process of the reproduction step, and starting the reproduction process from the reproduction start position of the specified material data.

15. (New) A record medium on which material data containing pictures and sound and a management information file that manages a file of the material data are recorded, the material data and the management information file being reproduced by an information process apparatus, reproduction history information about a reproduction process of the material data by the information process apparatus being recoded as one file that is different from the management information file, the reproduction history information composed of identification information of reproduced material data, information about a reproduction end position, and information about a reproduction method.
